

Oven Function Reference Table (Exact Manual Symbols)

Column 1 symbols are directly cropped from the provided instruction manual pages, plus Off (0).

Symbol	What the function does	What the function is used for
	Convection mode Top and bottom heating elements operate together.	Traditional baking and roasting on one shelf with balanced top and bottom heat.
	Grill mode Top inner element gives direct high heat.	Browning and searing meats, steaks, chops, and finishing the top surface quickly.
	Fan assisted grill mode Top grill element and fan run together.	For thicker cuts where surface browning and deeper heat penetration are needed.
	Multi-Cooking mode Top, circular, and bottom elements alternate with fan.	Uniform cooking and browning across racks for roasts, bakes, casseroles, fish, and cakes.
	Top heat mode Top heating element only.	Final browning or gratin finish at the end of cooking.
	Defrost mode Fan circulates room-temperature air.	Gentle thawing of frozen foods, including delicate items that should not be heated directly.
	Delicate cooking mode Bottom element and fan operate.	Best for pastries and cakes that need stronger heat from the bottom.
	Fan forced mode Fan element plus fan distribute heat evenly.	Even multi-shelf baking, especially for pastries, biscuits, and small delicate items.
	Fast Cooking mode Top and bottom elements plus fan operate together.	Quick cooking of frozen/pre-cooked foods and fast preparation with minimal preheating.
	Pizza mode Bottom and circular elements plus fan create strong heat.	Ideal for pizza and high-temperature dishes requiring a crisp, well-cooked base.
	Oven light function Switches on the oven lamp only.	Lets you monitor food inside the oven without changing cooking settings.
0	Off (0) function No heating element or fan operates.	Use when the oven is not in use.
